

## AcroWiFi for Healthcare

### The Cloud-Based, HIPAA/PCI Compliant WiFi Connectivity Service.

We live in an era of technology and connectivity. With the explosion of mobile devices such as laptops, smart phones and tablets, people are more connected than ever. It is, without a doubt, a fact that people expect to be able to connect from everywhere, either to work, or to entertain.

Healthcare system is also improving around the world at a rapid pace by leveraging mobile healthcare applications. This enables doctors and nurses to be much more efficient, being able to access and maintain patient data from everywhere in the hospital and/or campus, wherever the patient is, in real-time. Hospitals have started turning away from the paper-and-pencil ways.

This mobile healthcare revolution has started. However, given the many laws concerning patient record privacy, security of the internet connectivity must be taken in consideration in an extremely serious manner. Traditional, of-the-shelf wireless hot-spot/access points are not up to the standards.

*AcroWiFi is a fully managed service that will offer to install and maintain a HIPAA/PCI-compliant WiFi infrastructure for your entire hospital (or campus). Not only we are employing cutting edge technologies, but we monitor and maintain the entire platform from one, single, remote, central location, which increases management efficiency and lowers operational costs.*

AcroWiFi can help pay for itself. Our approach to centralized management surely helps lowering costs while improving security. But more distinctively, AcroWiFi has a function that can be leveraged as a marketing channel, which can be used to draw in more revenue for your hospital, and thus effectively lower the cost of ownership, if not even hit a positive cash flow. Not to mention that, in the process, you will be able give patients and visitors internet access as well, with no impact to you. This will surely please and ensure an increase in your customers' satisfaction.

### Features

- ✓ **HIPAA/PCI-Compliant.** AcromWiFi uses technology that meets most stringent security requirements.
- ✓ **Central Management.** All your WiFi campus will be configured, monitored and administered from one remote location.
- ✓ **Managed Splash Screen.** Users attempting to connect to internet through AcroWiFi will receive a welcome page. Its content can be controlled remotely.
- ✓ **Fully Managed Service.** Acrom will determine the best infrastructure for maximum coverage and performance, deploy and maintain the entire infrastructure.

### Benefits

- ✓ **Secure.** Your connectivity infrastructure benefits from the same security standards as the U.S. healthcare system.
- ✓ **Reliable.** All platform being centrally and remotely managed enables a fast and secure remediation of any disruption of service.
- ✓ **Revenue Generating/Marketing Channel.** Visitors and patients will get a splash screen when they attempt to connect to the internet. This mechanism can be leveraged for advertisement purposes.
- ✓ **Effortless.** Acrom offers WiFi infrastructure as a complete service. That is, we'll take care of every single detail to ensure it is covers your needs with no technical skill required on client side.
