

## **Infrastructure Engineer**

The job description includes specific IT infrastructure activities and skills as part of systems integration portfolio. We're looking for candidates willing to learn new technologies and participate in various internal and international projects.

### **RESPONSIBILITIES:**

Design/test/propose IT infrastructure solutions to various business needs;  
Prepare technical documentation and solution design documents;  
Off-Site infrastructure/applications deployment for external customers;  
Provide advanced technical support for various technologies/solutions/services, as needed;  
Participate in training sessions of new solutions/technologies, and subsequently train others;  
Take ownership of IT projects and coordinate other users, business partners and support organizations;

### **JOB QUALIFICATIONS:**

Experience in server/infrastructure management (Microsoft environment is preferred);  
Experience with server virtualization and networking;  
Experience with embedded systems is an advantage;  
Technical certifications (e.g. Microsoft) is a plus;  
Knowledge of scripting (shell scripts, batch files etc) to automate work is a plus;  
Very good English skills written and verbal, able to participate in meetings and teleconferences in English;  
Hands-on, practical character, organized and energetic;  
Customer oriented, good communication skills;  
Willing to travel.
